

3-D Research Note on INTC

MARKET PLAY

Chart courtesy of StockCharts.com

RATIONALE

- the stock got boost from IBM positive earnings surprise (14-Jan-08)-->> bottoming out
- strong support at 22.0-22.5 -->> large traders place buy orders at these levels
- MACD and Stochastic Oscillator look bullish, Stochastic Oscillator is oversold -->> the stock is gathering momentum
- low PEG (1.03), high profit (16.6%) & operating (20.1%) margins, Forward P/E (15.28)< Trailing P/E (21.96) -->> the stock looks undervalued, fundamentals should provide support
- long-term industry trends are supportive
- unusual high volumes for Feb 22.5 Calls -->> large traders bet on strong earnings report scheduled after close today

OUR RECOMMENDATION: BUY AT THE 22.7 LEVEL RECOMMENDED TRADING VEHICLE:

Open Debit Call Spread:

Buy to Open INTC Feb 20.0 Call

Sell to Open INTC Feb 22.5 Call

Initial Debit 1.90

Target 2.20

SHORT GLOSSARY

Break-even. Point at which gains equal losses. This is the market price that a stock must reach for an option to avoid loss if exercised. For a call, the break-even equals the strike plus the premium paid.

Call option. The right, but not the obligation, to buy the stock at a predetermined price (also known as the strike) at any moment before the expiration date for a paying a premium.

Put Option - the right, but not the obligation, to sell stock at a predetermined price (also known as a strike) at any moment before the expiration date.

Expiration Date. The day when an option contract becomes void (the Saturday after the third Friday of the expiration month).

In-the-Money Option. An option that has intrinsic value. A call (put) option is in-the-money if the strike is less (greater) than the current market price of the stock.

Intrinsic Value: The value of an option if it were to expire immediately with the underlying stock at its current price or the amount by which an option is in-the-money. For call options, this is the difference between the stock price and the striking price, if that difference is a positive number, or zero otherwise. For put options it is the difference between the striking price and the stock price, if that difference is positive, and zero otherwise.

Spread. A position with long and short options of the same type on the same underlying stock or index.

Time Value. Amount by which the current market price of an option exceeds its intrinsic value (the difference between the stock price and the strike). This additional value of an option is due to the volatility of the market and the time remaining until expiration.

Auto-trade in 5 easy steps
