✓	Unusually high option trading volumes for Apr 19,20 Calls, Mar 19,20 Calls	

COMMENTARY

Weekly ORCL chart: forming bottom. ORCL fundamentally undervalued, bottoming out. Investors bet on the upturn and don't allow to drop any further. Main sector components (ADBE, MSFT, SYMC) trend higher. Significant trade volumes after Mar 4.

SHORT GLOSSARY

Break-even. Point at which gains equal losses. This is the market price that a stock must reach for an option to avoid loss if exercised. For a call, the break-even equals the strike plus the premium paid.

Call option. The right, but not the obligation, to buy the stock at a predetermined price (also known as the strike) at any moment before the expiration date for a paying a premium.

Put Option - the right, but not the obligation, to sell stock at a predetermined price (also known as a strike) at any moment before the expiration date.

Expiration Date. The day when an option contract becomes void (the Saturday after the third Friday of the expiration month).

In-the-Money Option. An option that has intrinsic value. A call (put) option is in-the-money if the strike is less (greater) than the current market price of the stock.

Intrinsic Value: The value of an option if it were to expire immediately with the underlying stock at its current price or the amount by which an option is in-the-money. For call options, this is the difference between the stock price and the striking price, if that difference is a positive number, or zero otherwise. For put options it is the difference between the striking price and the stock price, if that difference is positive, and zero otherwise.

Spread. A position with long and short options of the same type on the same underlying stock or index.

Time Value. Amount by which the current market price of an option exceeds its intrinsic value (the difference between the stock price and the strike). This additional value of an option is due to the volatility of the market and the time remaining until expiration.

Auto-trade in 5 easy steps
